

メタルに Super Smooth Engagement 半クラ革命!! The perfection of metal clutch!

NEW Cushoning Disc Version | **Debut!!**

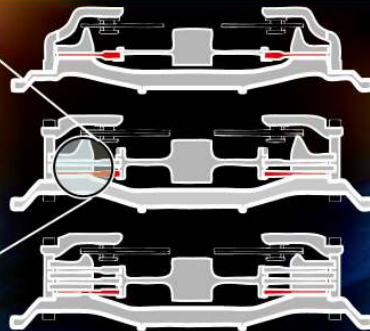

Cushoning Disk Version

Since its release at the end of last year, ATS center hub metal clutch has been highly praised for its torque capacity and quick & crisp shift feeling. Now with the introduction of the cushioning disc design, ATS successfully has achieved the ultra smooth engagement. Our metal clutch moved one step closer to the Perfection.

Cushoning disc - how it works

Red disc indicates the cushioning disc

The three packs in the red have a very minute level difference to produce the cushion.

For competition if you would like more direct engagement, please mention that you do not need the cushioning disc at the ordering

Feature

- Smooth engagement from the cushioning disc
- Quick shift from the center hub structure
- Excellent torque capacity
- Superb durability from the uncompromising workmanship
- Outstanding racing performance from 230mm disc

適合

As many applications as the carbon clutch

Driver's Voice Pro-driver Mitsuhiro Kinoshita

This metal clutch offers amazingly smooth engagement which is easy to the transmission. Even on a slippery road, the shifting does not upset the stability and balance of your car.
