

ATS Full Carbon clutch

The picture shows the carbon discs after the 15 times of drag racing with C&Y Sports Drag Carina 800 HP. The surface of the disc becomes mirror-like very nicely. The wear was 0.01mm for each disc. Zero warping. This suggests a very long disc life.

Max Capacity of triple full carbon 3,000 HP

Based on the test result, the first maintenance would be just adding one shim after about 500 drag launches. (Please note that this is a simple calculation based on the test we had. The result would vary depending on several conditions on the car and road condition.)
